

Requirement Sheet for Varsha's Team

Task 1: Finish Backend Part and Connect APIs with Frontend

- **Objective:** Complete the backend development and ensure APIs are properly connected for the application.
 - **Requirements:**
 - Create an API to store resources
 - Implement necessary functionalities to ensure the backend is fully functional.
 - Connect all required APIs, ensuring they interact smoothly with the frontend.
 - Implement error handling and logging for API requests and responses..
 - **Completion Date: 5 October 2024**
-

Task 2: Create a Section in Admin Dashboard to Manage Users

- **Objective:** Develop a new section in the admin dashboard that allows administrators to manage user accounts effectively.
 - **Requirements:**
 - Design a user management interface that includes the following features:
 - View a list of all registered users with pagination and search functionality.
 - Ability to add new users, edit existing user information, and delete users.
 - Implement role-based access controls to restrict actions based on user roles.
 - Provide a form for creating and editing user details, including fields like:
 - Username
 - Email
 - Password (with confirmation)
 - Role (User, Company etc.)
 - Ensure that the user management interface is user-friendly.
 - **Completion Date: 10 October 2024**
-

General Notes:

- **UI/UX Considerations:** The new admin dashboard section should maintain consistency with the existing design and adhere to usability standards.
- **Technology Stack:** Ensure to use frameworks or libraries, e.g., Node.js, Express, MongoDB for the implementation.
- **Testing:** Conduct thorough testing to ensure that both the backend and admin dashboard functionalities work as intended and that there are no security vulnerabilities.

Timeline:

- **Estimated Overall Completion Date: 10 October 2024**
- **Review Sessions:** A review session will be held every **3 days** to discuss progress and address any challenges.
